PROFESSIONAL SUMMARY

DevOps Engineer with hands-on internship experience at Davine Technologies and end-to-end projects in CI/CD, containerization, and AWS infrastructure. Skilled in Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, and Argo CD, with experience deploying a three-tier application on AWS EKS. Strong problem-solving skills with a focus on automation, scalable infrastructure, and reliable deployments.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, ECS, EKS, ALB)

Containers: Docker, Kubernetes

CI/CD & GitOps: Jenkins, GitHub Actions, Argo CD

IaC & Configuration Management: Terraform, Ansible

Scripting & Automation: Python, Bash/Shell Scripting

OS & Version Control: Linux, Git, GitHub

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch

Networking: TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, Load Balancing

EXPERIENCE

DevOps Intern | Davine Technologies

March 2026 – Aug 2026

- Gained hands-on experience in Linux administration, networking, and shell scripting through structured weekly tasks, including user and permission management, Bash automation, Cron scheduling, and Nginx deployments.
- Built and deployed multi-container applications using Docker and Docker Compose, configuring custom networks, persistent volumes, and publishing container images to Docker Hub.
- Implemented CI/CD and Infrastructure as Code practices by building Jenkins pipelines with GitHub webhook integration and provisioning/configuring infrastructure using Terraform and Ansible.

PROJECTS

1) MEAN Stack Application Deployment with GitHub Actions CI/CD | [GitHub](#)

- Designed and implemented a CI/CD pipeline using GitHub Actions for automated Docker image build and push to Docker Hub, reducing manual deployment effort and improving deployment speed.
- Containerized a multi-tier MEAN Stack application (Node.js + MongoDB) using Docker and Docker Compose, and deployed it on AWS EC2 with Nginx as a reverse proxy and persistent MongoDB storage.

Tools & Technologies: AWS EC2, Docker, Docker Compose, GitHub Actions, Nginx, Node.js, MongoDB

2) Terraform Multi-Environment AWS Infrastructure | [GitHub](#)

- Built modular Terraform IaC with reusable modules (EC2, S3, DynamoDB) for multi-environment (Dev, Stage, Prod) AWS infrastructure to improve scalability and maintainability.
- Configured a remote S3 + DynamoDB backend for secure state management and locking, and managed infrastructure lifecycle via Terraform plan, apply, and destroy workflows.

Tools & Technologies: Terraform, AWS (EC2, S3, DynamoDB, VPC), AWS CLI

3) Three-Tier Application Deployment on AWS EKS | [GitHub](#)

- Deployed a scalable three-tier application on AWS EKS using Kubernetes with AWS ALB for load balancing, configuring Deployments, Services, Ingress, and Secrets for high availability, auto-scaling, and secure secret management.
- Implemented a GitOps-based CI/CD pipeline using Jenkins and Argo CD to automate application deployments with zero-downtime rollout.
- Set up Prometheus and Grafana for application monitoring, dashboards, and alerting to improve observability.

Tools & Technologies: AWS EKS, AWS ECR, ALB, Kubernetes, Docker, Jenkins, Argo CD, Prometheus, Grafana

KEY ACHIEVEMENTS

- Reduced deployment time by 65% via GitHub Actions CI/CD automation, improved release efficiency by 50% with GitOps (Jenkins + Argo CD) on AWS EKS, and cut manual infra setup effort by 70% using reusable Terraform modules.

EDUCATION & CERTIFICATIONS

Bachelor of Computer Application (BCA)

Gujarat University, Ahmedabad

Jun 2022 – May 2025

Professional DevOps Training [[View Certificate](#)]

PySpiders Institute, Bengaluru

Jul 2025 – Feb 2026
