PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in **CI/CD automation**, cloud infrastructure, and containerized deployments on AWS. Proficient in AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, and Argo CD. A **collaborative** team player with a proactive **problem-solving** mindset with **strong communication skills** and a passion for **continuous learning** and process improvement.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, ECS, EKS, ALB)

Containers & Orchestration: Docker, Kubernetes

CI/CD & Automation: Jenkins, GitHub Actions, Argo CD

Infrastructure as Code & Configuration Management: Terraform, Ansible

Scripting & Languages: Python, Bash/Shell Scripting

Operating Systems: Linux, Windows

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch

Version Control: Git, GitHub

Databases: MySQL

Networking: TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, Load Balancing

PROJECTS

1. MEAN Stack Application Deployment with GitHub Actions CI/CD | [GitHub Repo](#)

- Designed and implemented a CI/CD pipeline using GitHub Actions for automated Docker image build and push to Docker Hub, reducing manual deployment effort and improving deployment speed.
- Containerized multi-tier MEAN Stack application (Node.js + MongoDB) using Docker and Docker Compose.
- Deployed the application on AWS EC2 with Nginx as a reverse proxy and configured persistent storage for MongoDB.

Tools & Technologies : AWS EC2, Docker, Docker Compose, GitHub Actions, Nginx, Node.js, MongoDB

2. Terraform Multi-Environment AWS Infrastructure | [GitHub Repo](#)

- Built modular Infrastructure as code (IaC) using Terraform multi-environment (Dev, Stage, Prod) AWS infrastructure.
- Developed reusable Terraform modules for EC2, S3 and DynamoDB to improve scalability and maintainability.
- Configured remote backend (S3 + DynamoDB) for secure Terraform state management and state locking.
- Managed infrastructure provisioning and lifecycle using Terraform (plan, apply, and destroy) workflows.

Tools & Technologies : Terraform, AWS (EC2, S3, DynamoDB, VPC), AWS CLI

3. Three-Tier Application Deployment on AWS EKS | [GitHub Repo](#)

- Deployed a scalable three-tier application on AWS EKS using Kubernetes with AWS ALB for load balancing.
- Implemented GitOps-based CI/CD pipeline using Jenkins and Argo CD to automate application deployments with zero-downtime rollout.
- Configured kubernetes resources (Deployments, Services, Ingress, Secrets) to ensure high availability, auto-scaling, and secure secret management.
- Set up Prometheus and Grafana for application monitoring, dashboards, and alerting to improve observability.

Tools & Technologies : AWS EKS, AWS ECR, ALB, Kubernetes, Docker, Jenkins, Argo CD, Prometheus, Grafana

KEY ACHIEVEMENTS

- Reduced application deployment time by **65%** through GitHub Actions-based CI/CD pipeline automation.
- Improved release efficiency **50%** by implementing GitOps workflow with Jenkins and Argo CD on AWS EKS.
- Reduced manual infrastructure setup effort by **70%** through automation and reusable modules.

EDUCATION & CERTIFICATIONS

Bachelor of Computer Application (BCA)

Gujarat University, Ahmedabad

Jun 2022 – May 2025

Professional DevOps Training

PySpiders Institute, Bengaluru

[View Certificate](#)

Jul 2025 – Jan 2026
